# Password Security & Multi-Factor Authentication Guide

CloudShield Enterprise Cyber Defense Document

1. Minimum Password Complexity Requirements:

- At least 12 characters combining uppercase, lowercase, numbers, and symbols.

- Avoid common dictionary words and personal identifying details.

2. Multi-Factor Authentication (MFA) Setup:

- Use hardware security keys (FIDO2/WebAuthn) or time-based OTP authenticators.

- Never approve push notifications that you did not explicitly initiate.

3. Incident Handling:

- If you suspect your password has leaked, change it immediately in Profile settings.
