Social Engineering Tactics & Defense Handout

CloudShield Enterprise Cyber Defense Document

SUMMARY OF COMMON SOCIAL ENGINEERING TECHNIQUES:

1. Phishing: Deceptive emails masquerading as trusted institutions (Google, MS365).

2. Spear Phishing: Highly targeted lures addressing employees by name and department.

3. Pretexting: Fabricating an urgent scenario (HR payroll direct deposit update).

4. Quid Pro Quo: Offering a fake IT software update or security scan.

DEFENSE RULE: When uncertain, verify through out-of-band communication.
